

BioNova natural swimming pools

The name BioNova stands for proofed and tested soil filters, components and substrates for the planning and construction of natural swimming pools in private and communal use, as well as within the wellness sector.

Headquartered near Munich in Germany, the company's offerings range from the Eco one-pot pond to a luxury pool featuring fully biological water purification.

Depending on requirements, BioNova can provide proven construction methods and technical components. To enable biological purification on even small plots, an underground unit has been developed which can be used as a sunbathing area or terrace.

The BioNova Pool is our patented answer for everyone wanting to do away with chemicals without abandoning a clear ambiance – for everyone desiring a higher level of cleanliness than offered by bathing ponds.

Operators of natural swimming and bathing pool facilities in the municipal, hotel and wellness sectors can clearly differentiate themselves from other operators by making this investment. Short breaks featuring a high level of relaxation are becoming increasingly popular, with biological treatment making it possible to add a “back to nature” element to the offering.

Sales and planning services are provided by trained partner companies in Europe, Israel, Australia and North America.
